I'm not the right person to ask about ability to gather this information; however, we are going to ask Dow for some of the PPH crude material that is being sent to the other laboratories and we will be analyzing this material to see if it matches the MSDS information we have received. I think ATSDR was trying to obtain more information from companies on these chemicals and did receive some this weekend.

Hi - We just got an additional question from R staff. Is this one that HQ should answer?
Thanks! Linda

Does EPA have the ability to gather proprietary information on chemicals? If so, is the EPA working to secure this information for PPH basic? Is the EPA able to share this information with other federal agencies also working on the issue (such as CDC and NIH)?
